Brayan Caicedo

Canterbury, Kent, UK | brayancc9912@gmail.com | linkedin.com/in/imbry

Profile

Platform engineer with nearly six years in DevOps and cloud infrastructure, mostly running Kubernetes on AWS and GCP. At CCSolutions.io I designed and built the company's multi-tenant AI Control Plane and its agent platform, and run the GPU fleet that serves six models on vLLM. Before that, over three years at PayU running EKS for a payments platform with 4M users. CKA, CKAD and KCSA certified.

Experience

Cloud & DevOps Consultant, CCSolutions.io | Remote | Jan 2026 - Present

- Designed and built the AI Control Plane, a multi-tenant AI product: an OpenAI-compatible Go API with RBAC, quotas and data residency, and a Next.js console.
- Built the Execution Plane, where the team builds and runs agents and workflows on Mastra from Slack, with sandboxed pods and least-privilege credentials.
- Run the GPU inference fleet behind it: six models on vLLM, provisioned with Terraform and Ansible, with a Go watchdog that keeps spot capacity up.
- Built the team's coding agent harness, used by 8+ developers, which pulls models, shared memory and tools from the Control Plane through MCP.
- Run Kubernetes infrastructure for 10+ client companies with Terraform, Argo CD and secure CI/CD.

DevSecOps Engineer (Contract), LATAM Airlines | Remote | Nov 2022 - Present

- Moved CI/CD to Jenkins shared libraries and GitLab CI, cutting deploy time by 30%.
- Run GCP infrastructure (GKE, Cloud Build, IAM) for critical services at 99.5% uptime.
- Manage IaC with Terraform Cloud and Terragrunt, cutting setup time by 40%.

Research Assistant, Python Developer (Part-time), LJMU | Mar 2026 - Jul 2026

- Built and deployed a free public web platform for RNA researchers with Flask, Docker and Render: mirna-pipeline-ueap.onrender.com
- Covers miRNA target prediction with GO and pathway enrichment, and siRNA design with OligoFormer on Modal GPUs or the Prospero HPC cluster via SLURM.
- Exports XLSX, PDF and HTML reports, backed by a SQLite cache and a pytest suite.

Senior DevOps Engineer, PayU | Remote, Colombia | Nov 2024 - Aug 2025

- Rolled out Karpenter on EKS with Terraform, saving US$10k a month on infrastructure.
- Set up GitOps with FluxCD and DORA tracking, raising deploy frequency by 20%.

DevOps Engineer, PayU | Remote, Colombia | May 2022 - Nov 2024

- Built and ran Kubernetes on AWS for a payments platform with 4M users.
- Built CI/CD pipelines in GitLab, Bitbucket and Jenkins: 10+ deploys a day, 25% faster.
- Introduced dynamic pipelines in GitLab that reduced pipeline errors by 35%.

DevOps Analyst, Lucasian Labs | Cali, Colombia | Dec 2020 - May 2022

- Set up CI/CD with Jenkins, Bitbucket and SonarQube, and ran Linux servers and AWS.

Education

MSc Computing and Information Systems (Distinction), Liverpool John Moores University, 2026

BEng Biomedical Engineering, Universidad Autónoma de Occidente, Colombia, 2024

Certifications

- Certified Kubernetes Administrator (CKA), The Linux Foundation, 2024
- Certified Kubernetes Application Developer (CKAD), The Linux Foundation, 2025
- Kubernetes and Cloud Native Security Associate (KCSA), The Linux Foundation, 2025
- AWS Certified Developer Associate, Amazon Web Services, 2024

Technical Skills

- **Cloud & IaC:** AWS, GCP, Nebius, Terraform, Terragrunt, Ansible, CloudFormation
- **Containers & Orchestration:** Kubernetes (EKS, GKE), Docker, Helm, Karpenter
- **CI/CD & GitOps:** GitLab CI, Jenkins, Bitbucket Pipelines, Argo CD, FluxCD
- **LLM Infrastructure:** vLLM, llm-d, Mastra, MCP, Modal
- **Observability:** Prometheus, Grafana, OpenTelemetry
- **Security:** mTLS, OIDC (Zitadel), RBAC, SonarQube
- **Languages & Frameworks:** Go, Python, TypeScript, Java, Flask, Next.js
